Organizing your files can start by giving them a proper name. While changing the title of one file can be easy and not take long, renaming entire lists of items can prove to be exhausting. However, tools like File Renamer Turbo can alter the name of entire batches of items in one go. The app lets you load countless files, of various formats, and apply numerous filters at once. These are further divided into basic and advanced. For example, you can find and remove certain words or insert text at given positions. Also, you may choose one of the many capitalization options (always capitalize, sentence case, first letter up, upper case, lower case, reversed case, uppercase initials, capitalize after). Another filter permits changing the file extension. This can overwrite the current extension, while the new one can be removed altogether. The app also enables users to delete the existing ID3 tags of music files. Furthermore, you may add tags to MP3s, such as artist, title, album name, year of launch and music genre. This modification may be done manually or automatically, by using one of the functions the app comes with: searching online databases. A counter can also be applied to the entire list of files, whether numerical or alphabetical.
